

WATCH OUT FOR THAT TRUCK!

DISTRACTED WALKING CAN GET YOU HIT.

Don't assume drivers see you,
make eye contact.

It's little comfort to know you had the right of
way while laying in a hospital bed.

KEEP AWARE OF YOUR SURROUNDINGS.

KEEP YOU & YOUR DEVICES SAFE.

It only takes a few seconds while looking down at your cell phone to become distracted. In those few seconds you might become unaware of oncoming traffic and be seriously injured. Studies have shown that a majority of people are talking, texting, or looking down at their cell phone and are not staying aware of their surroundings.

Did you know?

- 50 percent of pedestrian deaths are among kids ages 19 and under and injuries among older teens are also on the rise with an increase of 25 percent over the previous five years. Distraction is a very likely reason. Help stop these tragedies by becoming aware and spreading the word.
- More than 1,500 pedestrians were estimated to be treated in emergency rooms in 2010 for injuries related to using a cell phone while walking. As more people have acquired cell phones and more people are using them, the number of injuries has certainly increased.

It is very important to put your devices down and pay attention of your surroundings while walking. We care about your safety. Please, practice safe habits while being on your cell phone and spread the word.
